

ASSIGNMENT 2

DOMAIN: IOT

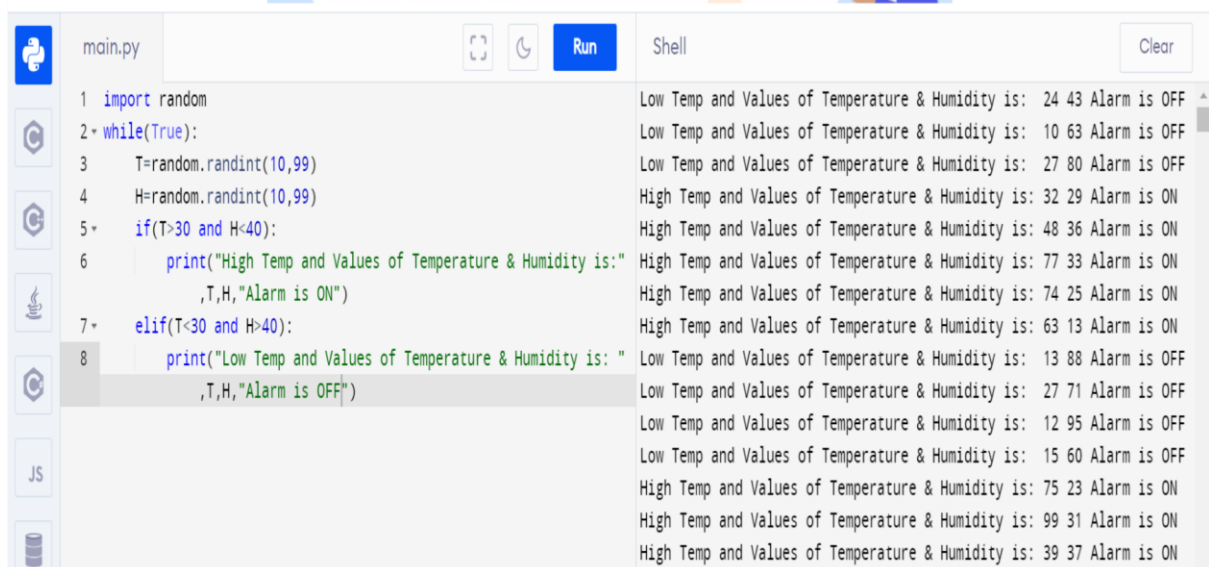

PROJECT TITLE: GAS DETECTION MONITORING & ALERTING SYSTEM

TEAM ID: PNT2022TMID44793

TEAM MEMBERS:

1. L.Sathish - Team Leader
2. S.P.Dhayananth
3. D.Karthik
4. R.Manoranjitham
5. R.Shankar

Write a condition to continuously detect alarm in case of high temperature

The screenshot shows a Python IDE with a file named 'main.py' and a 'Shell' window. The code in 'main.py' is as follows:

```
1 import random
2 while(True):
3     T=random.randint(10,99)
4     H=random.randint(10,99)
5     if(T>30 and H<40):
6         print("High Temp and Values of Temperature & Humidity is:"
              ,T,H,"Alarm is ON")
7     elif(T<30 and H>40):
8         print("Low Temp and Values of Temperature & Humidity is: "
              ,T,H,"Alarm is OFF")
```

The 'Shell' window displays the output of the script, showing a continuous loop of random temperature (T) and humidity (H) values, along with the corresponding alarm status (ON or OFF). The output is as follows:

```
Low Temp and Values of Temperature & Humidity is: 24 43 Alarm is OFF
Low Temp and Values of Temperature & Humidity is: 10 63 Alarm is OFF
Low Temp and Values of Temperature & Humidity is: 27 80 Alarm is OFF
High Temp and Values of Temperature & Humidity is: 32 29 Alarm is ON
High Temp and Values of Temperature & Humidity is: 48 36 Alarm is ON
High Temp and Values of Temperature & Humidity is: 77 33 Alarm is ON
High Temp and Values of Temperature & Humidity is: 74 25 Alarm is ON
High Temp and Values of Temperature & Humidity is: 63 13 Alarm is ON
Low Temp and Values of Temperature & Humidity is: 13 88 Alarm is OFF
Low Temp and Values of Temperature & Humidity is: 27 71 Alarm is OFF
Low Temp and Values of Temperature & Humidity is: 12 95 Alarm is OFF
Low Temp and Values of Temperature & Humidity is: 15 60 Alarm is OFF
High Temp and Values of Temperature & Humidity is: 75 23 Alarm is ON
High Temp and Values of Temperature & Humidity is: 99 31 Alarm is ON
High Temp and Values of Temperature & Humidity is: 39 37 Alarm is ON
```
